

NAct – Access Control Tunnel

NControl Security Integrations introduces **NAct**. **NAct** is designed to enhance a standard access control system by adding long or short range RFID readers.

PACKAGE INCLUDES

Preconfigures RFID readers based on installation requirements

NAct Server – if required

Design Documents

Usage Manual

HIGHLIGHTS

- Enhance your access control system
- Provide faster access to your facility
- Keep employees protected and out of inclement weather
- Increase productivity in situations where need to access secure areas on a regular basis
- Automate functions
- Control access and departures
- Save time and Money

Use **NAct** to:

- Enhance your access control system
- Provide faster access to your facility
- Keep employees protected and out of inclement weather
- Increase productivity in situations where need to access secure areas on a regular basis

NAct allows access to access controlled doors or gates without having to stop, roll down a window and present a credential. This system is ideal for locations with heavy truck or vehicle traffic.

The **NAct** reader(s) monitor the defined area around the controlled gate or door. When a credential is seen, the information is forwarded to the Access Control System for authorization. If authorized, the gate/door will be opened by the Access Control System.

Based on installation requirements, either Active or Passive RFID hardware can be used as part of the system. Active RFID hardware is used for heavy truck or vehicle traffic in larger facilities, where Passive RFID hardware is used for smaller Access Control Systems, such as Community or Small Business access.

NAct is designed to work directly with most Access Control Systems or can be used in conjunction with the **NControl's NEAT** or **NEAT Enterprise** systems. The system output a Wiegand-formatted message (used by most access control systems) in 26, 31, 33 or 37 bits.

NAct can be used in stand-alone mode - Where the system monitors the RFID readers at the access points and determines if the person is authorized to enter, then opens the gate/door. Includes standard reports on activity.

For additional information on **NEAT** please contact **NControl Security Integrations, LLC** at either sales@ncontrolsecurity.com or via telephone at (219) 285-0141.
