

NControl Security Integrations, LLC introduces NCount. NCount is a scalable system that offers an easy to use and install system which provides the location of all asset and personnel.

#### PACKAGE INCLUDES

Handheld RFID reader loaded with NCount Software

NCount application license

NCount cloud server (optional)

Installation Guide

Usage Manual

#### HIGHLIGHTS

- Capable of reading 1D barcode and GEN2 passive tags with the same system
- Stand Alone or Cloud-based options
- Reports that shows information on item location that can be accessed by an internet capable devices
- Open platform for integration with third-party applications
- Prevent loss and theft
- Transfer items between locations quickly and easily
- Save time and Money

## NCount – Handheld Device RFID Tracking

NControl Security Integrations introduces a new, easy to use, modularized RFID inventory system. **NCount** is designed to provide a more cost efficient RFID inventory control system than previously available. Using **NCount** to do periodic inventories provides timely and effective loss detection and increases the ability to affect loss prevention.

**NCount** is comprised of a preconfigured web based inventory server, portable RFID readers with the **NCount** Enrollment and Survey application and industry-standard GEN 2 passive RFID tags.

Since the **NCount** server resides on the customer's network, it allows multiple people within the organization to view inventory reports on their desktop, smart phones, or tablets and export that inventory data to common spreadsheet applications.

The **NCount** database is ODBC compliant making **NCount** an open platform for integration with other third-party applications. The portable RFID reader is also capable of reading 1D barcode for possible integration with other customer systems.

Use **NCount** to:

- Control inventory and prevent loss
- Determine missing items based on the last inventory performed
- Forward inventory to other applications
- Combine inventory from multiple locations into a single report
- Use NCount to find missing items
- Transfer items between locations easily

**NCount** is available in two different options:

The first is a stand-alone inventory system that will have all information contained in the **NCount** Handheld RFID Device. No connection to external devices necessary. Great for performing inventory in remote locations where internet access is not available.

The second is a cloud based system (**NCount Cloud**) that contains all inventory information. This system allows multiple **NCount** Handheld devices to take inventory and forward the information to a single location. Users can access inventory reports from the cloud with any internet enabled device and perform inter-company transfers. Ideal for multiple location companies with that need a single master inventory of all items.

For additional information on **NCount** please contact **NControl Security Integrations, LLC** at either [sales@ncontrolsecurity.com](mailto:sales@ncontrolsecurity.com) or via telephone at (219) 285-0141.
