

NControl Security Integrations introduces, **NEATLite Facility Tracking and Control**. The system is a cost-effective way to monitor and report asset activity without purchasing an expensive system.

The thrust in creating this system is to make asset tracking easier to understand, easier to use, easier to implement, and at an affordable price.

PACKAGE INCLUDES

Computer optimized for
NEATLite Facility Tracking and Control with applications installed
NGate door control appliance
Usage Manual

TRACKING OPTIONS

Shows all assets in and out of a facility instantly and updates dynamically.
Displays the amount of time that an asset has been in or out of the facility.
Reports historic information on all entrance and exit activity of each asset.

NEAT Lite – Facility Tracking and Control

NEAT Lite Facility Tracking and Control is a RFID tracking and reporting solution that includes a pre-configured computer with all applications installed. Plug the computer in, add RFID equipment, and start tracking. The system is designed for use with Active or Passive RFID technology.

NEATLite Facility Tracking and Control is a network designed solution and uses IP based RFID readers that are located at each of the facility access points (door or gates). The system is designed to monitor the area around the access point for asset tags, carried by vehicles or personnel. When a tag is 'seen' at the access point, the system will open a secure gate or door and record the activity.

Software is very intuitive, easy to use without training or extensive manuals and provides for naming of reader(s) and tags making the tracking and reporting personal to the given implementation.

Use **NEAT Lite Facility Tracking and Control** to:

- Control access to your facility by using RFID readers to monitor assets and control doors – in a single system
- Track the movement of personnel through the range of asset readers at entrance/exits.
- Track the amount of time vehicles have been gone from a bus station or terminal.
- Determine what assets are currently in the facility, and when they returned.
- Know which personnel are in the facility in the event of an emergency.

NEAT Lite Facility Tracking and Control is targeted at either the integrator or end user looking to implement an active RFID solution with up to ten (10) readers and control up to ten (10) doors.

For additional information on **NEAT Lite Facility Tracking and Control** please contact **NControl Security Integrations, LLC** at either sales@ncontrolsecurity.com or via telephone at (219) 285-0141.
