

NEAT – Visitor System

NControl Security Integrations introduces NEAT. NEAT is a scalable system that offers an easy to use and install system which provides the location of all asset and personnel in real-time and reports that show movement history.

The **NEAT** system offers options to enhance the functionality of the system. These options are designated into two different groups. The first group is subsystems, which are applications that are software based options. The second are devices, which are hardware devices with software that are added to the **NEAT** system.

HIGHLIGHTS

- Control Access
- Know how is in your facility
- Know where they are
- Protect secure areas in facility
- Ensure all visitors have left
- Automate functions
- Save time and Money

Use **NEAT Visitor System** to:

- Control Access
- Know where visitors are in case of emergency
- Ensure all visitors have left the facility by closing time
- Review visitor movement to ensure they have been in unauthorized areas

The **NEAT Visitor System** uses already installed RFID hardware along with our Visitor Control application to track visitors as they move around your facility.

Personnel use the enrollment piece of the **NVisitor** application to schedule visits and enter the information about the visitor including:

- Name
- Company
- Duration of visit
- Department or person visiting
- Purpose of visit

And any other information required by the organization.

When visitors arrive at your facility they are checked in via the **NVisitor** application, which runs on a tablet or smart phone device. The check in process includes issuing a predefined visitor's tag.

As they move around the facility, the **NEAT** system will monitor and record their location. Additional features include the ability to generate alarms if a visitor enters a restricted area, or a visitor is not escorted by authorized personnel.

Users have access to a number of standards reports that are a part of the **NVisitor** application.

These reports include:

- Visitors in facility
- Visitors that have left
- Expected visitors for the day
- Visitor movement information

Once their visit is completed, the visitor turns in the credential and is checked out of the **NEAT Visitor System**. The visitor badge then can be re-issued to the next visitor.

Historic information about the visit and the visitor's movement is stored in the system for future use,

For additional information on **NEAT Visitor System** please contact **NControl Security Integrations, LLC** at either sales@ncontrolsecurity.com or via telephone at (219) 285-0141.
